3D Capture Services: Preparation & Expectations

Thank you for choosing Perspective 3D
If you have any questions related to site preparation, please reach out to your project manager at anytime.

Upon our arrival, prepare to give the technician a brief tour so they can get a feel for building and room layout.

Getting Ready
- Freshly vacuum and carpeting
- Dust as needed.
- Replace burned out light bulbs.
- Remove any signs of clutter or exposed "storage" areas.
- Put away items that do not belong in the room.
- Tidy up desk areas, removing personal Items.
- Align rugs and remove dirty mats.
- Straighten wall hangings and signage.
- Clean windows.
- Align window coverings.
- Straighten displays.
- Clean mirrors and other shiny or reflective objects.
- Empty or remove trash cans.
- Remove any seasonal items that may date your tour, like holiday decorations.
- Discreetly cover any items you wish to not have included.

Just Prior to Shoot
- Turn all ceiling fans OFF. They will create a motion blur in your tour.
- Turn all inside lights ON.
- Notify technician of any automatic lights that may turn off with inactivity
- Close all doors that are not a part of the tour.
- Open all doorways to areas that will be included in the tour.
- Go over with technician what displays, cabinets or drawers are to be shown on the inside.
- Turn off computer monitors or tv screens. If desired, you may have a still image on these screens.
- When possible, have all people exit the area so that we can quickly capture the space without any impediments or distractions.
- If leaving the building, please provide technician with lock-up instructions.

What to Expect
- The camera captures information in a complete 360 rotation as the technician positions the camera in strategic locations throughout the space.
- Once production begins we will need the room we are working in to remain stable at all times so that we can achieve proper imagery alignment.
- Anything the camera "sees" will be included in the 3D experience. We **cannot** "photoshop" anything out, however we **can** hide camera positions in post production and blur out images or people.

We look forward to completing an amazing experience for you and your team.
